Data Visualization with Power BI and Tableau

Practical – III

Roll No.: T018	Name: Sachin Ramesh Mehta
Class: TYIT	Batch: 1
Date of Assignment: 14/08/2026	Date/Time of Submission: 14/08/2026

Creating Advanced Visualizations in Tableau

a) Create stacked and grouped bar charts for comparison

b) Build treemaps and pie charts for part-to-whole analysis

c) Design scatter plots to identify relationships

d) Create dual-axis and combination charts

e) Develop histograms for distribution analysis

f) Build box-and-whisker plots

g) Use Gantt charts and advanced date visualizations

Conclusion:

Advanced visualizations in Tableau provide an effective way to analyze and interpret supermarket sales data. Stacked bar charts and treemaps help compare sales across different categories, while pie charts show the contribution of each category to the overall sales. Scatter plots reveal relationships between variables, and dual-axis charts allow the comparison of multiple measures over time. Histograms and box-and-whisker plots help analyze data distribution and identify outliers. Gantt charts provide a time-based view of sales activities. Overall, these visualizations make it easier to identify patterns, compare performance, understand customer behavior, and gain meaningful insights from the dataset.
